LASIK is the most popular eye surgery choice for treating low-to-moderate levels of nearsightedness, farsightedness and astigmatism. Its popularity is largely attributable to its proven track record. Since its introduction, LASIK has been an incredibly safe procedure, and bladeless LASIK technology has further enhanced its safety.

LASIK at Eye Care Northwest is always a completely bladeless treatment. Commonly referred to as iLASIK, bladeless treatment means two types of lasers are used correct your vision. During the first step, Dr. Liegner uses the Intralase® laser to prepare your eye for the laser treatment. Secondly, he uses the VISX® S4 excimer laser to sculpt your cornea into the desired shape for optimal vision. No combination of technology is safer. This equipment coupled with Dr. Liegner's experience is a recipe that is proven to deliver excellent results.
